

Readme for AEJApp-2008-0139.R1

Data:

TaiwanEd_f_agg.dta is the data file containing aggregated data for fathers.

TaiwanEd_m_agg.dta is the data file containing aggregated data for mothers.

intensity.dta contains county-year specific populations and number of new school openings.

The mother and father aggregated data were created from individual birth and death certificate files in Taiwan from 1978 to 1999.

Program:

Tables_TaiwanEd.do is the Stata .do file that uses both **TaiwanEd_f_agg.dta** and

TaiwanEd_m_agg.dta to create the tables that are found in the paper. It also uses

intesnisty.dta to create output that is used in Figure 2. Within the .do file, there are individual programs with names corresponding to the number of the table it produces. Results are outputted via the `-outreg2-` command into .xls files.
